306	377	291	224	229	244	145

Cumulative No. of cases for 2016 (First 17 weeks): 7326

Compiled by Communicable Diseases Division, Ministry of Health

244 dengue cases were reported in the week ending 30 April 16, **15** cases more than in the previous week. We need to remain vigilant and continue to work as a community to keep dengue cases in check. The majority of mosquito breeding is still being found in homes, such as in domestic containers, flower pot plates and trays. There have also been four dengue deaths already this year, the same number as the whole of 2015. All stakeholders need to sustain prevention efforts as we enter the traditional dengue peak season. With effect from 14 March 2016, NEA has extended its enforcement regime to all residences found breeding mosquitoes, regardless whether they are within or outside dengue clusters, to ensure that all homeowners take immediate steps to remove and prevent mosquito breeding in their premises.

Source eradication of mosquito breeding habitats and spraying of insecticides to control the adult mosquito population remain key to dengue prevention, and we need to keep up with these efforts as we strive towards mitigating the forecast surge in cases in the coming months. NEA, together with the various agencies and other stakeholders represented on the Inter-Agency Dengue Task Force (IADTF), including Town Councils, have been checking and ridding our public areas and housing estates of potential mosquito breeding habitats.

NEA encourages everyone to join in the collective effort to help stop the dengue transmission cycle by doing the 5-step Mozzie Wipeout on alternate days. Those planning to go on vacation should mosquito-proof their homes before they travel. Those infected with dengue should also apply repellent as regularly as possible to prevent mosquitoes from biting and picking up the virus from them, and those showing symptoms suggestive of dengue, should see their GPs early to be diagnosed. All of us, including residents, contractors, and business owners, have a part to play in preventing dengue. The latest updates on the dengue situation can be found at the Stop Dengue Now Facebook page, www.dengue.gov.sg or the myENV app.
