Cumulative No. of cases for 2014 (First 33 weeks): 13225						
Compiled by Communicable Diseases Division, Ministry of Health						

**443** dengue cases were reported in the week ending 16 Aug, **104** cases fewer than the previous week. Although this was an improvement, we remain in the peak dengue season. Areas of concern include the dengue clusters at the Choa Chu Kang, MacPherson, Kaki Bukit and Ubi areas. All stakeholders in these clusters need to step up vigilance and efforts to stem dengue transmission urgently.

To protect ourselves, all of us need to play our part in removing stagnant water from our environment, so as to deprive the mosquitoes of their breeding habitats. Inverting pails and plant pot plates, changing water in vases regularly, and capping bamboo pole holders when they are not in use are simple steps that everyone can take to prevent mosquitoes from establishing a foothold in our neighbourhoods. Those infected with dengue should protect themselves from mosquito bites by applying repellent regularly, and those showing symptoms suggestive of dengue should see their GPs early to be diagnosed.

NEA encourages everyone to be an advocate and remind his family members and neighbours to join in the collective effort to help stop the dengue transmission cycle by doing the 5-step Mozzie Wipeout. All of us, including residents, contractors, and business owners, have a part to play in preventing dengue. The latest updates on the dengue situation can be found at the Stop Dengue Now Facebook page, [www.dengue.gov.sg](http://www.dengue.gov.sg) or the myENV app.
