Latest Dengue Data

Number of Dengue cases <i>It is important to note that day-to-day numbers fluctuates as they depend on the number of notification received. Therefore, weekly numbers are a better reflection of actual trends.</i>						
No. of Reported Cases*						
14-Jan	15-Jan	16-Jan	17-Jan	18-Jan	19-Jan	20-Jan at 3pm
12	8	13	8	15	14	4
*provisional						
No. of Reported Cases by E-week (from Sun 0000hrs to Sat 2359hrs)						
E-week 49 (04.10Dec16)	E-week 50 (11.17Dec16)	E-week 51 (18.24Dec16)	E-week 52 (25.31Dec16)	E-week 01 (01.07Jan17)	E-week 02 (08.14Jan17)	E-week 03 (15.20Jan17 at 3pm)
59	81	72	64	70	93	62
Cumulative No. of cases for 2017 (First 2 weeks): 163						
Compiled by Communicable Diseases Division, Ministry of Health						

93 dengue cases were reported in the week ending 14 January 2017, **23** cases more than the previous week. Dengue remains endemic in Singapore and we must continue this year to work as a community to suppress the *Aedes* mosquito population and stem dengue transmission. As the same mosquito vector which transmits dengue also transmits Zika, yellow fever and chikungunya, the preventive measures implemented will also help to prevent Zika and other vector borne diseases from taking root in Singapore.

Source eradication of mosquito breeding habitats and spraying of insecticides to control the adult mosquito population remain key to dengue prevention. NEA, together with the various agencies and other stakeholders represented on the Inter-Agency Dengue Task Force (IADTF), including Town Councils, have been checking and ridding our public areas and housing estates of potential mosquito breeding habitats. NEA encourages everyone to join in the collective effort to help stop the dengue transmission cycle by doing the 5-step Mozzie Wipeout. All stakeholders need to remove stagnant water from our environment, so as to deprive the mosquitoes of their breeding habitats.

The majority of breeding are found in homes, with the top breeding spots being domestic containers and flower pot plates/trays. In view of the upcoming Chinese New Year festive season when households purchase and display Chinese New Year plants, plant buyers / owners are urged to be vigilant especially during and immediately after the Chinese New Year festive period. Mosquito breeding spots can easily be prevented mosquito breeding if plant owners practise the following steps:

- Turn over all water storage containers when not in use
- Change water in vases on alternate days
- Remove water from flower pot plates on alternate days
- Loosen hardened soil on alternate days

If homeowners plan to do spring-cleaning, they are advised to properly dispose of their refuse to avoid these becoming unintentional breeding habitats. Those planning to go overseas for vacation during the upcoming Chinese New Year weekend should also mosquito-proof their homes before they travel. You can keep your neighbourhood safe from dengue by taking these mosquito prevention measures:

- Cover all toilet bowls in the home
- Seal off the overflow pipe of the flushing cistern
- Cover and seal off all floor trans
