Dengue Cluster Information @ NEA 2013  
Click [here](#) for more NEA information in OneMap

(Map data is updated at 1am. Kindly clear your internet browser cache after each visit, in order to view the latest information.)

Operationally, a dengue cluster indicates a locality with active transmission where intervention is targeted. It is formed when two or more cases have onset within 14 days and are located within 150m of each other (based on residential and workplace addresses as well as movement history). The clusters are categorised according to their current status. A [list of preventive actions](#) also accompanies each alert level. There are 3 alert levels:

| Definition                                            | Alert Level |
|-------------------------------------------------------|-------------|
| High-risk area with 10 or more cases                  | Red         |
| High-risk area with less than 10 cases                | Yellow      |
| No new cases, under surveillance for the next 21 days | Green       |

Each cluster map illustrates the extent of NEA's current vector control intervention. Please click on the cluster location to view the respective map.
