Latest Dengue Data

Number of Dengue cases

It is important to note that day-to-day numbers fluctuates as they depend on the number of notification received. Therefore, weekly numbers are a better reflection of actual trends.

No. of Reported Cases*

24-May	25-May	26-May	27-May	28-May	29-May	30-May at 3.30pm
30	31	32	31	19	14	19

*provisional

No. of Reported Cases by E-week (from Sun 0000hrs to Sat 2359hrs)

E-week 16 (17-23Apr16)	E-week 17 (24-30Apr-16)	E-week 18 (01-07May16)	E-week 19 (08-14May16)	E-week 20 (15-21May16)	E-week 21 (22-28May16)	E-week 22 (29-30May16) at 3.30pm
229	242	180	216	212	199	33

Cumulative No. of cases for 2016 (First 21 weeks): 8130

Compiled by Communicable Diseases Division, Ministry of Health

199 dengue cases were reported in the week ending 28 May 16, **13** cases fewer than in the previous week. We need to remain vigilant and continue to work as a community to keep dengue cases in check. The majority of mosquito breeding is still being found in homes, such as in domestic containers, flower pot plates and trays. There have also been five dengue deaths already this year, the same number as the whole of 2014. All stakeholders need to sustain prevention efforts as we enter the traditional dengue peak season. With effect from 14 March 2016, NEA has extended its enforcement regime to all residences found breeding mosquitoes, regardless whether they are within or outside dengue clusters, to ensure that all homeowners take immediate steps to remove and prevent mosquito breeding in their premises.

Source eradication of mosquito breeding habitats and spraying of insecticides to control the adult mosquito population remain key to dengue prevention, and we need to keep up with these efforts as we strive towards mitigating the forecast surge in cases in the coming months. NEA, together with the various agencies and other stakeholders represented on the Inter-Agency Dengue Task Force (IADTF), including Town Councils, have been checking and ridding our public areas and housing estates of potential mosquito breeding habitats.

NEA encourages everyone to join in the collective effort to help stop the dengue transmission cycle by doing the 5-step Mozzie Wipeout on alternate days. Those planning to go on vacation should mosquito-proof their homes before they travel. Those infected with dengue should also apply repellent as regularly as possible to prevent mosquitoes from biting and picking up the virus from them, and those showing symptoms suggestive of dengue, should see their GPs early to be diagnosed. All of us, including residents, contractors, and business owners, have a part to play in preventing dengue. The latest updates on the dengue situation can be found at the Stop Dengue Now Facebook page, www.dengue.gov.sg or the myENV app.
