Latest Dengue Data

Number of Dengue cases

It is important to note that day-to-day numbers fluctuates as they depend on the number of notification received. Therefore, weekly numbers are a better reflection of actual trends.

No. of Reported Cases*

2-Jul	3-Jul	4-Jul	5-Jul	6-Jul	7-Jul	8-Jul at 3pm
35	12	48	50	17	57	14

*provisional

No. of Reported Cases by E-week (from Sun 0000hrs to Sat 2359hrs)

E-week 21 (22-28May16)	E-week 22 (29May-04Jun16)	E-week 23 (05-11Jun16)	E-week 24 (12-18Jun16)	E-week 25 (19-25Jun16)	E-week 26 (26Jun-02Jul16)	E-week 27 (03-08Jul16) at 3pm
199	216	158	193	214	234	198

Cumulative No. of cases for 2016 (First 26 weeks): 9144

Compiled by Communicable Diseases Division, Ministry of Health

234 dengue cases were reported in the week ending 2 Jul 16, **20** cases more than in the previous week. As we are in the traditional peak dengue season, we are anticipating an upward trend in the number of dengue cases in the coming months. NEA's Gravitrap data has shown a steady increase in the *Aedes aegypti* mosquito population in our community in the last two months. Since April, we have observed 50 per cent more *Aedes aegypti* mosquitoes caught in Gravitraps that have been deployed islandwide. This indicates an abundance of the mosquito vector in our community. As a large proportion of our population is susceptible to dengue infection due to the lack of immunity, an increase in the *Aedes* mosquito population could lead to a surge in dengue cases unless measures are taken to suppress the *Aedes* mosquito population. We need to remain vigilant and continue to work as a community to keep dengue cases in check.

Source eradication of mosquito breeding habitats and spraying of insecticides to control the adult mosquito population remain key to dengue prevention, and we need to keep up with these efforts as we strive towards mitigating the forecast surge in cases in the coming months. NEA, together with the various agencies and other stakeholders represented on the Inter-Agency Dengue Task Force (IADTF), including Town Councils, have been checking and ridding our public areas and housing estates of potential mosquito breeding habitats.

NEA encourages everyone to join in the collective effort to help stop the dengue transmission cycle by doing the 5-step Mizzie Wipeout. Those planning to go on vacation should mosquito-proof their homes before they travel. Those infected with dengue should also apply repellent as regularly as possible to prevent mosquitoes from biting and picking up the virus from them, and those showing symptoms suggestive of dengue, should see their GPs early to be diagnosed. All of us, including residents, contractors, and business owners, have a part to play in preventing dengue. The latest updates on the dengue situation can be found at the Stop Dengue Now Facebook page, www.dengue.gov.sg or the myENV app.
