Cumulative No. of cases for 2014 (First 26 weeks): 8669

Compiled by Communicable Diseases Division, Ministry of Health

In the week ending **28 Jun 2014**, there were **676** reported cases of dengue. This is a significant increase in cases from the previous week. NEA expects that there may be a further rise in dengue incidence as the warmer weather over the next two to three months shortens the breeding and maturation cycles of the *Aedes* mosquitoes, as well as the incubation periods for the dengue virus. The best way to mitigate the higher transmission is to continue efforts to reduce the mosquito population. NEA and its Inter-Agency Dengue Task Force partners, as well as Town Councils, are not letting up on efforts to check for and remove potential mosquito breeding habitats. The 'Do the Mozzie Wipeout' Campaign 2014 was also recently launched to reinforce the need for everyone to remove stagnant water from their environment. As community support is critical in stopping dengue transmission, we strongly encourage everyone to do the 5-Step Mozzie Wipeout and join in the collective effort to fight dengue.
