## Latest Dengue Data

### Number of Dengue cases

*It is important to note that day-to-day numbers fluctuates as they depend on the number of notification received. Therefore, weekly numbers are a better reflection of actual trends.*

#### No. of Reported Cases\*

7-Jun	8-Jun	9-Jun	10-Jun	11-Jun	12-Jun	13Jun at 3.30pm
57	34	94	71	97	80	13

\*provisional

#### No. of Reported Cases by E-week (from Sun 0000hrs to Sat 2359hrs)

E-week 18 (27Apr-03May14)	E-week 19 (04-10May14)	E-week 20 (11-17May14)	E-week 21 (18-24May14)	E-week 22 (25-31May14)	E-week 23 (1-7Jun14)	E-week 24 (8-13Jun14) at 3:30pm
251	261	292	429	456	461	389

Cumulative No. of cases for 2014 (First 23 weeks): 6936

Compiled by Communicable Diseases Division, Ministry of Health

In the week ending 7 Jun 2014, there were 461 reported cases of dengue. Cases continue to be on the rising trend. DENV-1, the strain of virus that caused the 2013 epidemic, remains dominant. A large proportion of our population is still susceptible to dengue infection due to the lack of immunity. The hotter months of June to October are also when we usually see higher transmission of dengue in Singapore due to shortened breeding and maturation cycles for the *Aedes* mosquitoes and shorter incubation periods for the dengue virus.

The best way to mitigate this higher transmission is to continue efforts to reduce the mosquito population. To protect ourselves, all of us need to play our part in removing stagnant water from our environment, so as to deprive the mosquitoes of their breeding habitats. We encourage everyone to be an advocate and remind his or her family members and neighbours to join in the effort to help stop the dengue transmission cycle. Those planning to go overseas for vacation during the upcoming school holidays should mosquito-proof their homes before they travel. Everyone has a part to play in preventing dengue.
